# How Your MSL Score Works

Measures of Student Learning • Cañon City Schools Fremont RE-1

## How the old RANDA scoring worked

In the old RANDA method, each measure was given one of three ratings using cut points set separately for that measure. Each rating was worth a fixed share of the measure's points:

| Less Than Expected | Expected | More Than Expected |
|---|---|---|
| **No points** | **Half the points** | **All the points** |

Where you landed within a rating didn't change your score. The new calculator keeps the same 300-point scale, rating ranges, and RANDA entry, but replaces the three fixed results with a sliding scale. Hitting your Goal still earns half the points, and every point between Min and Max moves your score.

## How the new calculator works

Your Goal Score is the **midpoint**, not the finish line.

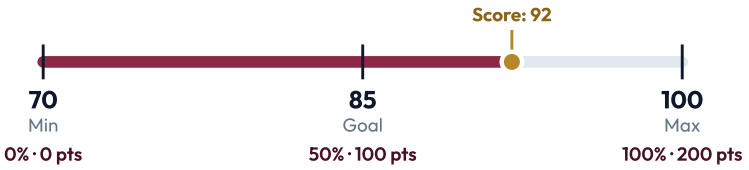

1. **Reach your Goal** and you earn **half** of that measure's points. That's the "Expected" mark.
2. **Reach your Max** and you earn **all** of that measure's points.
3. **Every point in between counts.** Points rise steadily from Min to Max, so each point of improvement earns credit.

## Example: a 20% measure

Your MSL score is 30% (300 points) of your Final Effectiveness Rating. This can be split between collective and individual measures. A 20% measure is worth **200 points**.

| Goal Score | Max Score | Min (auto) | Score achieved |
|---|---|---|---|
| 85 | 100 | 70 | 92 |

Min sits the same distance below Goal as Max sits above it: `Min = 2 × Goal − Max = 2 × 85 − 100 = 70`

**Points earned for this measure** **146.67 / 200.00**

### Why isn't 92 worth 92%?

The scale for this measure runs **70 → 100**, not 0 → 100. A score of 92 is **22 of the 30 points** up that scale:

`(92 − 70) ÷ (100 − 70) = 73.3%`

73.3% of 200 points = **146.67**

Scoring against 0–100 would ignore your goal. Someone who hit exactly their goal of 85 would get 85% instead of the intended 50%, and the goal would no longer be the midpoint.

## How it adds up to 300

Each measure is scored out of its own points: `Weight ÷ 30 × 300`. The measure scores are added together for your MSL Score.

| | | |
|---|---|---|
| **IPR**<br>10% · example score 85 | | **85.00 / 100.00** |
| **Example measure**<br>20% · score 92 | | **146.67 / 200.00** |

| MSL Score | RANDA Entry (score ÷ 100) | Rating |
|---|---|---|
| **231.67** / 300 | **2.32** | **More Than Expected** |

| Less Than Expected 0–99 | Expected 100–200 | More Than Expected 201–300 |
|---|---|---|
